DETAILED ACTION

This Office action is in response to the Appeal Brief filed 02/25/2009.

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claims Allowed

The following is an examiner's statement of reasons for allowance:

A process for coproduction of high purity paraxylene and styrene starting from a feedstock containing xylenes, ethyl benzene and C₉-C₁₀ hydrocarbons, the process comprising the steps as claimed in claims 21 and 43, wherein a distilled raffinate product containing metaxylene, orthoxylene and a minor amount of ethyl benzene compared to the xylenes is dehydrogenated and the dehydrogenated product is separated to produce styrene of 99.8% purity, is not taught or fairly suggested in the prior art.

The difference between the prior art and the claimed process is that the claimed invention starts with a similar feed, avoids an adsorption and a distillation step to purify the feed, but still achieves the same purity of the styrene. Thus, the claimed invention eliminates two steps required by the prior art and still maintains a high purity product which is unexpected in view of the prior art applied.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
